

VICTORIA TOWER ADELAIDE

THE CHALLENGE

Across 37 levels, Victoria Tower Adelaide required a coordinated hardware solution for residential, commercial and shared spaces, balancing reliable performance with a consistent architectural aesthetic.

THE SOLUTION

Entro delivered a coordinated hardware package across the tower, with carefully selected finishes and hardware aligned to the building's material palette and varied functional requirements.

THE OUTCOME

The completed package provides a consistent and durable hardware solution throughout the development, supporting both the building's functionality and contemporary design intent.

Considered hardware and close coordination were key to delivering consistency across a project of this scale.
